<div>Tag-Based MultiCell TABLE</div> <div>Done by Bintintan Andrei</div>				
	<div>Description</div> <p>This method allows printing <b>&lt;TAG&gt;</b> formatted text with line breaks. They can be automatic (as soon as the text reaches the right border of the cell) or explicit (via the <b>\n</b> character). As many cells as necessary are output, one below the other.</p> <p>Text can be <b>aligned</b>, <b>centered</b> or <b>justified</b>. Different <b>Font</b>, <b>Sizes</b>, <b>Styles</b>, <b>Colors</b> can be used. The cell block can be framed and the background painted. The behavior/paramaters of the method are the same as to the <b>FPDF Multicell method</b>. <b>Links</b> can be used in any tag.</p> <p><b>TAB</b> spaces (<b>\t</b>) can be used. The <b>ttags</b> tag name is reserved for the TAB SPACES.</p> <p>Variable Y relative positions can be used for <b>Subscript</b> or <b>Superscript</b>.</p> <div> <div>Controlled Tab Space</div> <div> <div>- Tab Space 1</div> <div>- Tab Space 2</div> <div>- Tab Space 2</div> <div>- Tab Space 3</div> <div>- Tab Space 1</div> <div>- Tab Space 2</div> </div> </div> <p>If no <b>&lt;TAG&gt;</b> is specified then the FPDF current settings are used.</p>
